Introduction

Up to now, ophthalmology examination still highly depends on labor resource to maintain data. Although modern medical devices become more and more accurate, there exists no integrated system to turn data into structured records. It costs time to organize data and type them into HIS, which causes two critical problems, low efficiency and typos.

The MDS is a total solution to solve these two problems. It automatically fetches data directly from device (which eliminate typo) and intelligently transfer data into e-records (which makes efficiency). The MDS also provides integrated record retrieval interface that helps staff realize patient situation in graphical and statistical manner.

Features

Support various Output-ready medical devices

Suitable for both clinics and hospitals

Flexible patient identification methods

Automatic data transmission

Lightweight /Deep-coupling HIS integration

Data analysis

Ready for customization

Usage Scenario

Test

Retrieve Doctors read the e-records

02

Identify Scan / Read card

03

Transfer Fetch data and upload

Specifications

Supported devices: see website for detail (www.mdslinx.com)

Dimensions: $250 \times 135 \times 43$ mm (W x D x H)

Weight: 1.25kg

Screen: 7-inch multi-touch display

- Communication: RJ45 ethernet . WI-FI
- Patient Identification: Standard Edition: IC card

Advanced Edition: IC card, RFID

Enterprise Edition: IC card, RFID, barcode, QR code

- Mounting: VESA 75mmX75mm
- Power Supply: 12-24VDC
- Power Consumption: 10W

Data Input: RS232, USB, Network

Record Output: Standard Edition: TXT, CSV, JPG files on network drive Advanced Edition: Network Drive/Database

Enterprise Edition: Network Drive/Database/WEB Service

EMR System: Customized integration with NRE or MDS Data retrieval EMR system.

MDS Installation

POWER

Take out the MDS, adapter, and power cable from MDS box. Plug the power cable with the adapter.

Plug the adapter into MDS power connector.

Turn on the power and then MDS will auto start. Long press power key can switch on/off the MDS.

MDS Setting

Press the setting icon on the top-right

The default password is "5586888"

Setting Page

You can press the "Update" button to reload WiFi list in the setting page.

	5	М	DS	
ľ		DN	1	Update

Local Server:

- : No WiFi or the server is un-reachable.
- : The server is alive.

The Latest Version:

- There is a new version for updating, go to "Update Menu" for further information.
- It's the latest version now.

If you don't need a server, input a random well-formatted IP address with port. And also check the "Not Report Server" checkbox.

How to use

The latest machines support list will show in our website www.mdslinx.com

RS232 Mode

Choose connected device (Please check online-web and upgrade MDS firmware for more supported device.)

Use Crytalvue Tonometer as demonstration **RS232 Mode**

Image Mode
